

IFT 259 Introduction to Internet Networking

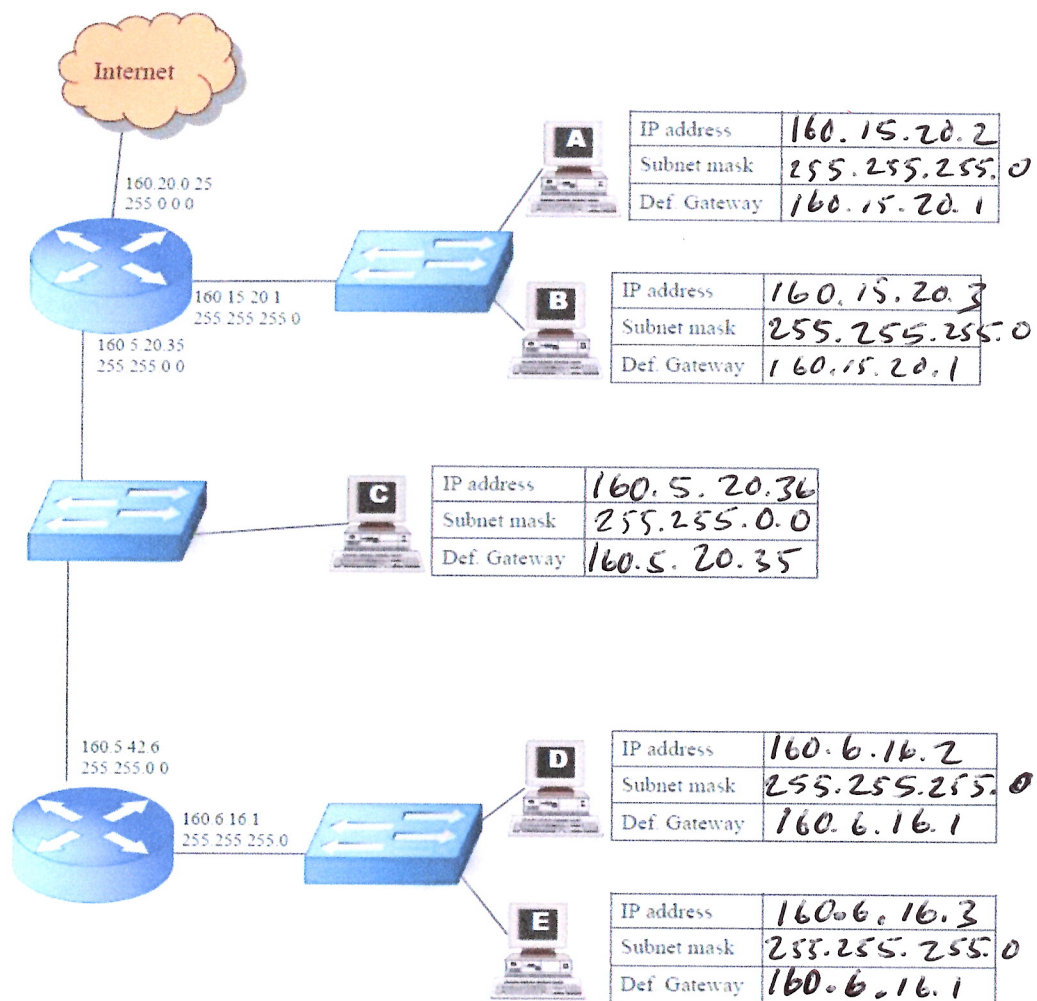

Lab 14 Router Address Configuration

For all parts of the lab, assume all switches are layer 2 switches (unmanaged switches)

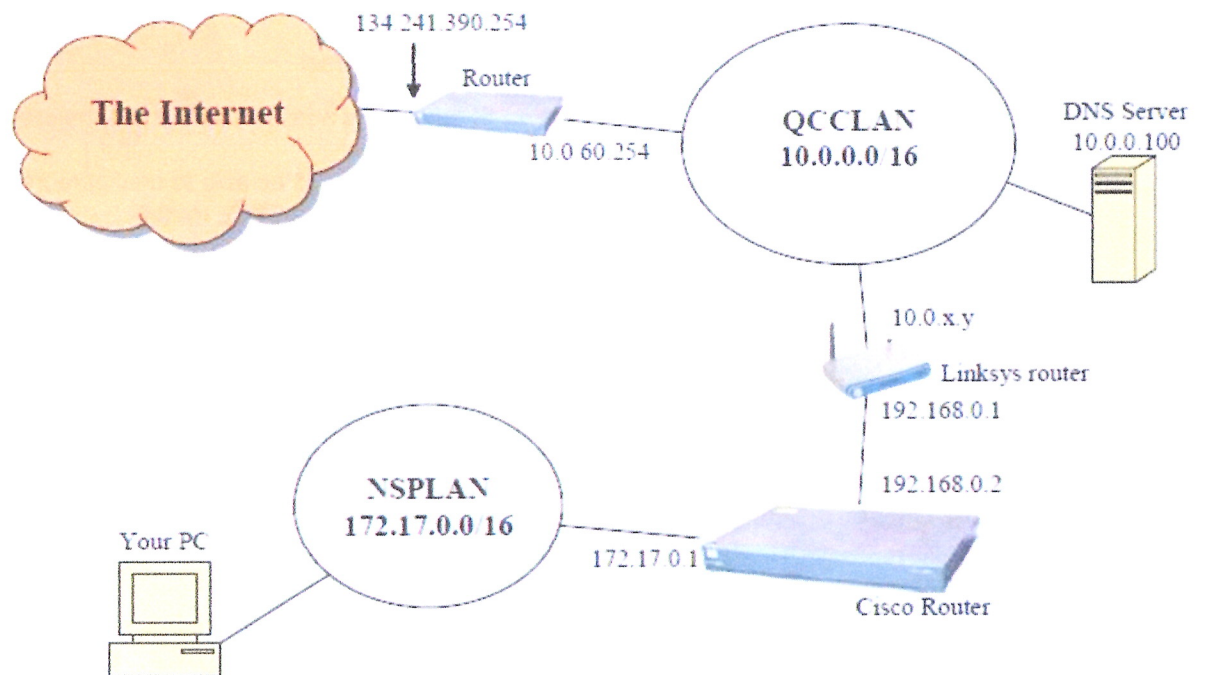

Part A: IP Configuration

For each of the computers A, B, C, D and E assign an IP address, a subnet mask, and a default gateway.

By understanding the Router's IP address and Subnet Mask, you should be able to configure the PCs on the networks. A PC can sometimes can get their configuration details from multiple routers.

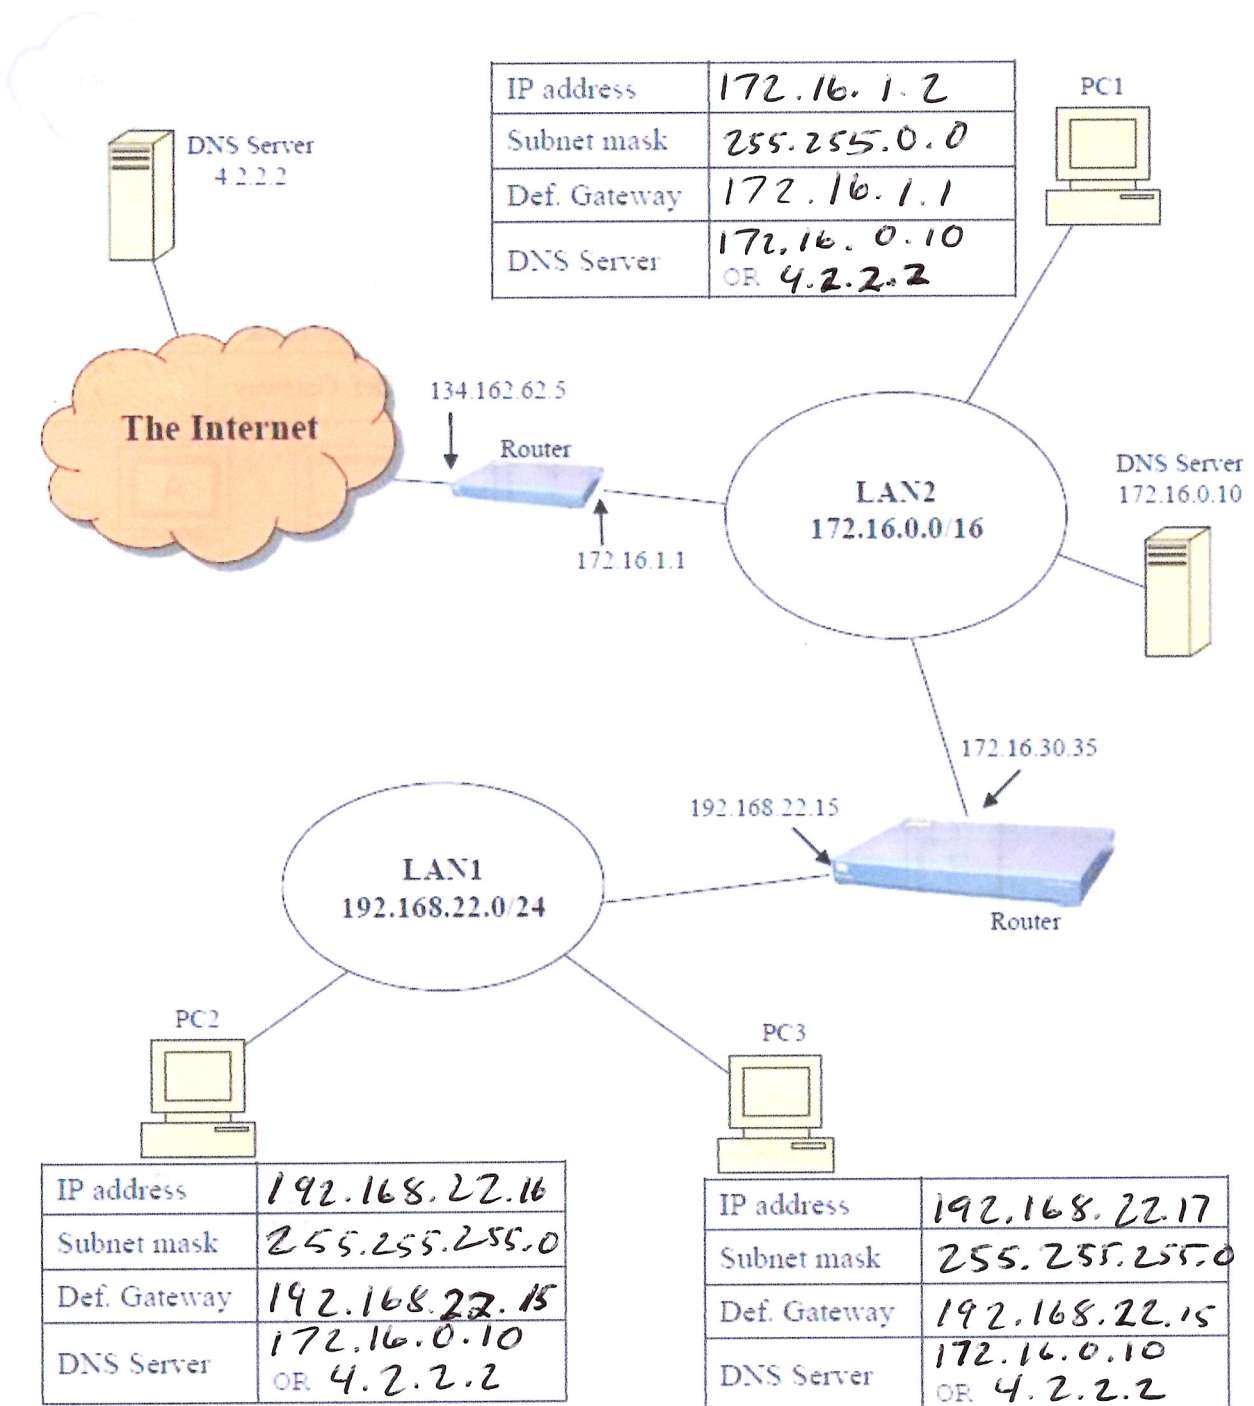

Assign an IP address, subnet mask, default gateway and DNS server address to Your PC in the following network:

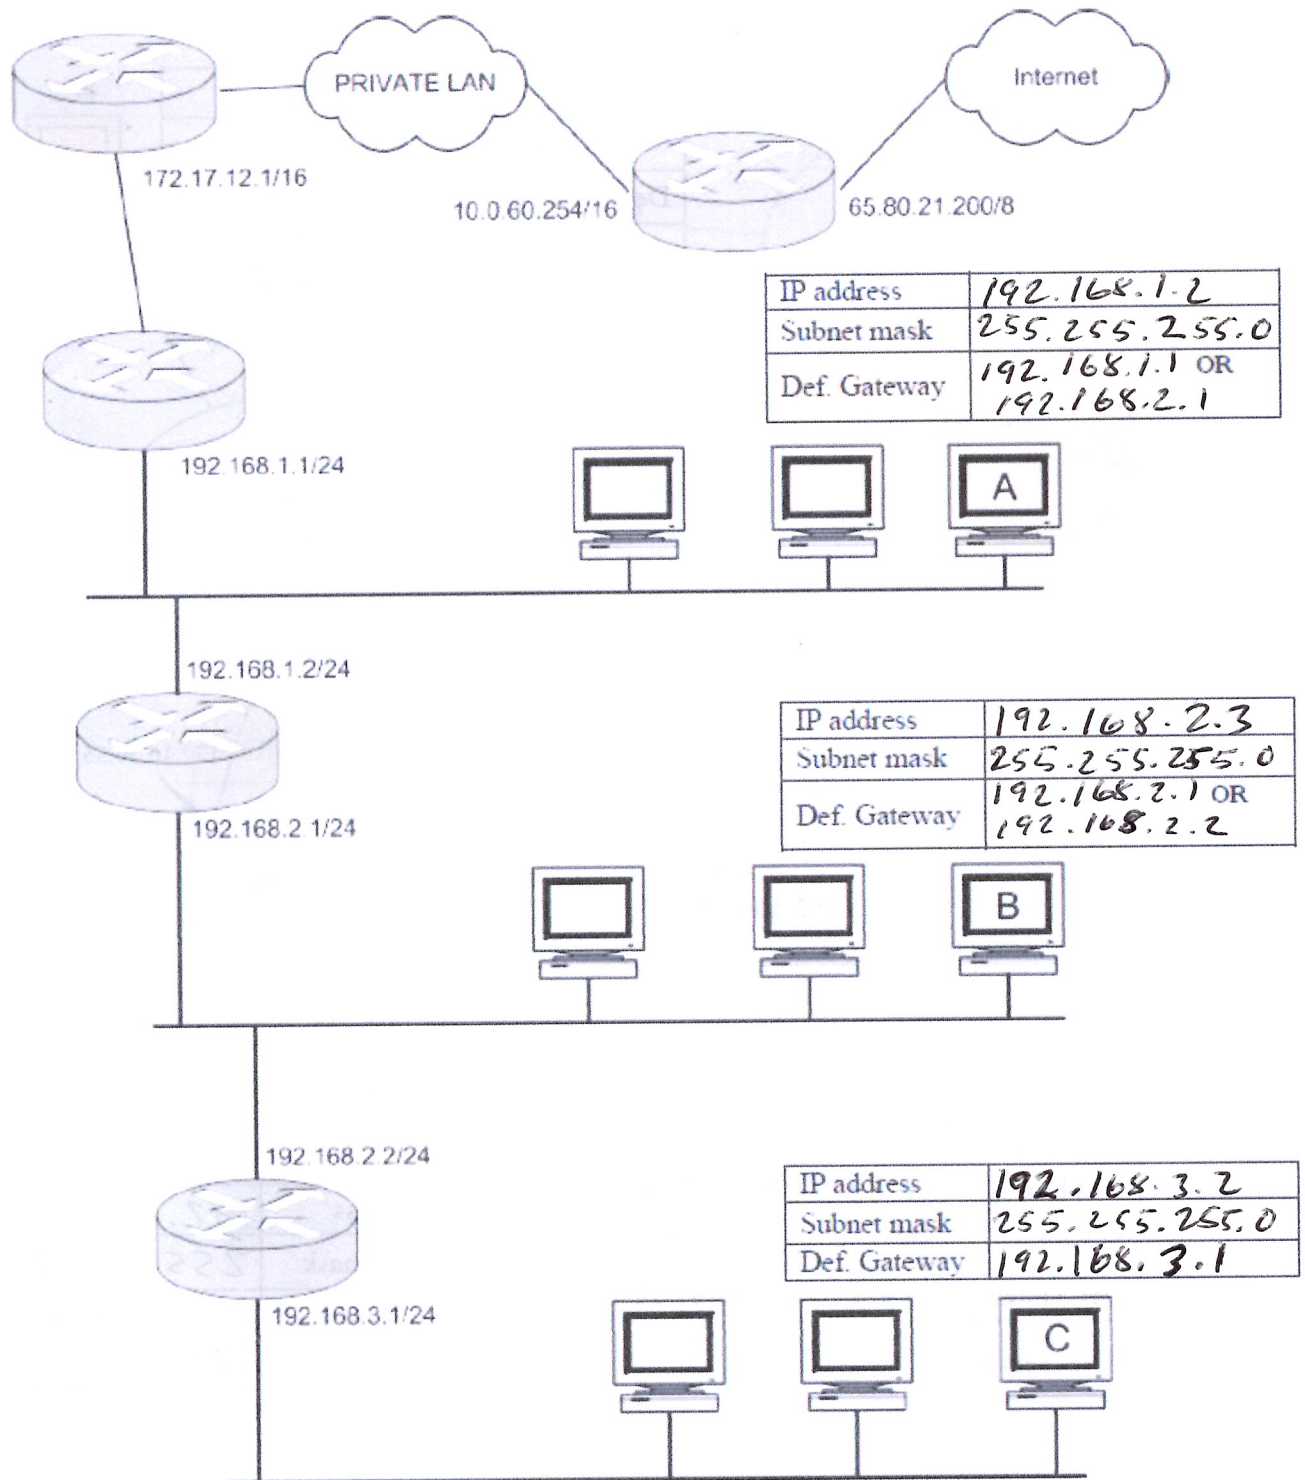

IP address	172.17.0.2
Subnet mask	255.255.0.0
Def. Gateway	172.17.0.1
DNS Server	10.0.0.100

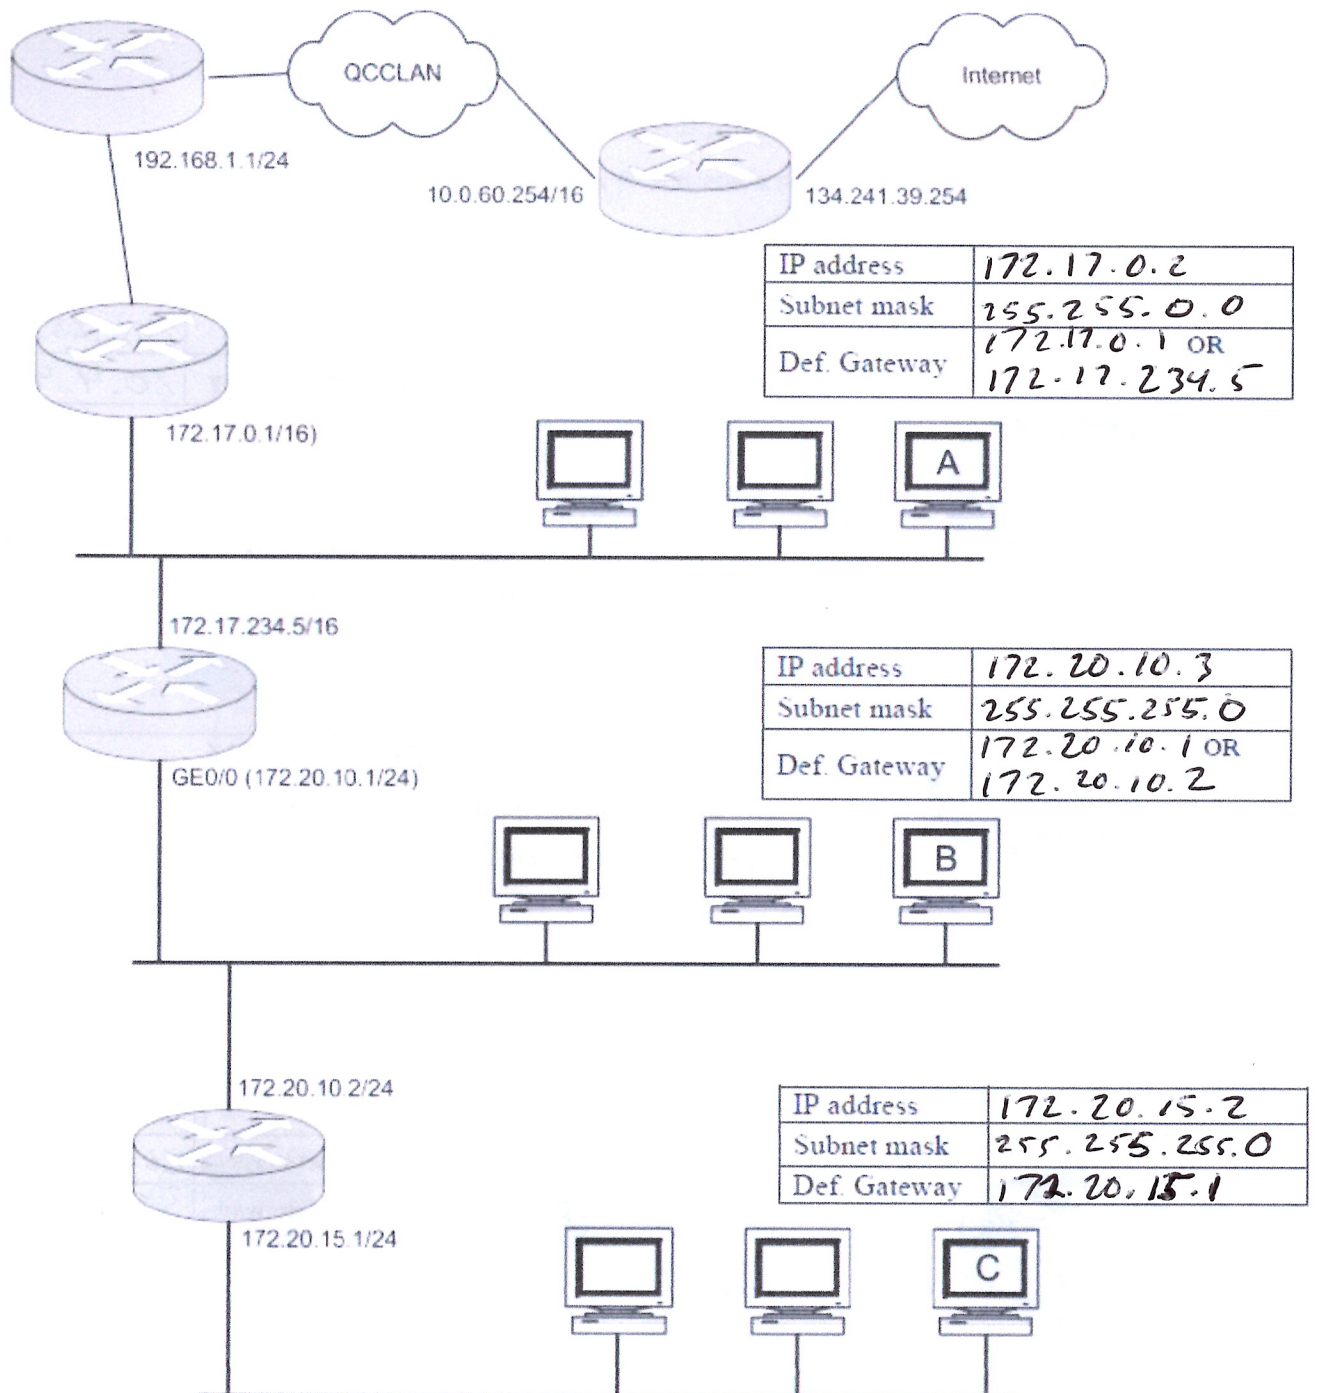

Assign a valid IP address, SM, DG, and DNS server address to PC1, PC2, and PC3 in the following network:

For each of the computers A, B, and C, assign an IP address, a subnet mask, and a default gateway.

For each of the computers A, B, and C, assign an IP address, a subnet mask, and a default gateway.

For each of the computers A, B, C, D, and E assign an IP address, a subnet mask, and a default gateway.
